

AIR SUPERIORITY™ AIR FILTER SILENCER

NEW!
Only from
Vortron

Now available **Exclusively** from **Vortron**, our new air intake filter-silencer is the real deal! A result of exhaustive acoustic and aerodynamic development work, this unit delivers the absolute best attainable performance in a compact, directly mountable package. It provides 2-3 dB noise reduction below 'commercial' filter-silencer products, and greater than 8 dB reduction below common low-cost filters. The element is a user-serviceable reinforced mesh of the exact same design and construction seen on racing vehicles. A perfect choice for high-humidity or 'wet' environment installations. Mounts directly on all **AIRPOWER®** blowers. 1,000 SCFM rating, includes Filter Monitor indicator - Switch Monitor optional.

Optional Equipment Includes:

- Vortron's Filter Monitor and Switch Monitor provide a convenient, inexpensive means of monitoring filter element restriction and remaining life of the filter element. A visual "pop-up" indication occurs when the filter element becomes "loaded" and excessive pressure drop occurs. In addition, Vortron's Switch Monitor provides a set of switch contacts which may be used in system control panels or a plant PLC. Accurate monitoring ensures that filter elements are replaced and serviced when necessary. Available for any Vortron filter.
